# React

wo soll das noch hinführen?

**Eine Diskussion** 

Sebastian Springer | Nils Hartmann | und ihr

## Go full-stack with a framework

React is a library. It lets you put components together, but it doesn't prescribe how to do routing and data fetching. To build an entire app with React, we recommend a full-stack React framework like Next.js or Remix.

**DEEP DIVE** 

#### Can I use React without a framework?

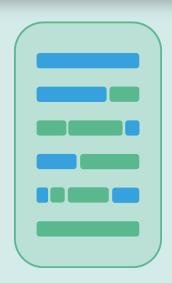

↑ Hide Details

You can definitely use React without a framework—that's how you'd use React for a part of your page. However, if you're building a new app or a site fully with React, we recommend using a framework.

Here's why.

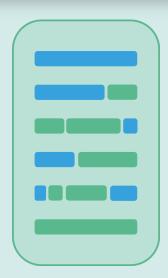

If your app has unusual constraints not served well by these frameworks, or you prefer to solve these problems yourself, you can roll your own custom setup with React. Grab react and react-dom from npm, set up your custom build process with a bundler like Vite or Parcel, and add other tools as you need them for routing, static generation or server-side rendering, and more.

## Vergangenheit: JavaScript-Schnipsel-Architektur

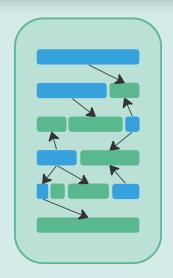

Typische Technik: Backend-Sprache, Template-Sprache, JavaScript, jQuery

## Vergangenheit: JavaScript-Schnipsel-Architektur

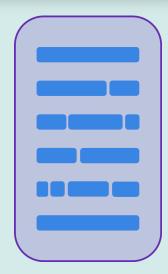

**Gut**: JavaScript nur für Interaktion

## Vergangenheit: Schnipsel-Architektur

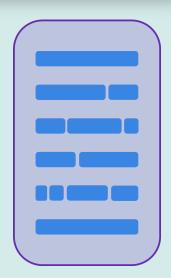

Schlecht: Schnell unübersichtlich, unwartbar, kaputt

## **Gegenwart: Single-Page-Anwendung**

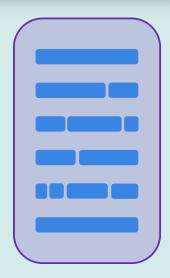

Alles in JavaScript

**Gegenwart: Single-Page-Anwendung** 

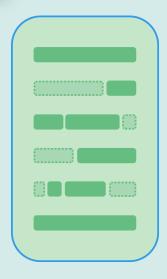

**Gut**: Klare Verantwortlichkeit (UI ist Client-Sache)

**Gegenwart: Single-Page-Anwendung** 

**Schlecht**: JavaScript auch für statische UI (Performance!)

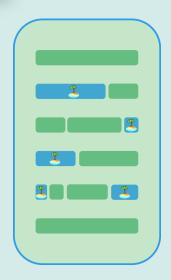

## Fullstack-Anwendungen

Ebenfalls ganz in JavaScript

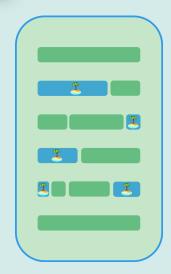

Laufen auf dem Server

### Fullstack-Anwendungen

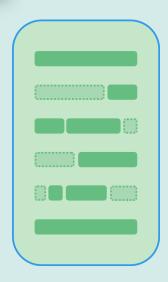

**Gut**: JavaScript **zur Laufzeit** nur für interaktive Teile im Client ("Islands")

## Fullstack-Anwendungen

**Schlecht**: ?

## Fullstack-Anwendungen

Zurück zur Schnipsel-Architektur

Aber: Auftrennung in Server/Client-Teil übernimmt aber das Framework für uns

## ...aber wo soll das alles hinführen? 🙀
